

The SwitchMaster-4 Smart Turnout

A Smart Turnout will allow one train to go Left, (Passenger train goes to Station) while the other train goes to main line. (Freight train does not go to station).

All trains with the magnet offset to the left will go left, all trains with the magnet offset to the right will go right.

Optionally, a signal lamp can be controlled by using the Lamp1 & Lamp2 outputs. Connect one of the "-" outputs to the common wire.

The Smart Turnout works for ALL trains- Electric and Battery powered.
